

A clean approach to public safety

**Get your passengers and crew back  
in the air with confidence...**

### **No-Touch Disinfection Process**

Our envelopment process offers a full-coverage clean that is dispersed remotely. Once the cleaning solution sets and the area is ventilated, you're ready to get back in the air.

A certificate of Envelopment Decontamination is provided after each cleaning.

### **Experienced Aircraft Maintenance Technicians**

Feel at ease knowing you have someone with extensive aviation experience inside your aircraft.

Each technician is thoroughly trained on our equipment and holds an Institute of Inspection Cleaning and Restoration Certification (IICRC) Health and Safety Technician Certificate.

### **Non-Corrosive, Non-Toxic and Environmentally Friendly Cleaning Solution**

Used by the U.S. military and on FAA-certificated aircraft, our cleaning solution is safe for you and for the planet. It has been Boeing and independent lab-tested for corrosion and proven harmless to aircraft surfaces.

### **Saving You a Trip - We Come to You**

No traveling necessary - save time and resources by letting us come to you.

Our lightweight, portable equipment makes it easy to meet you when and where you need us.
